COMPUTER SCIENCE COURSES OFFERED  
AT UM DURING SUMMER SESSIONS

MISSOULA--

The Department of Computer Science at the University of Montana is offering three computer courses on the Missoula campus during the 1976 UM Summer Session.

Commenting on the courses, Dr. Robert P. Banaugh, professor and chairman of computer science at UM, said, "Persons who may be interested in the courses are teachers and others wanting to learn more about computer programming. Also, we have had several participating high school students tell us they took courses because colleges they planned to attend required a basic knowledge of computers."

The arrangement of the courses has been changed from the schedule originally announced by the UM Center for Continuing Education and Summer Programs (CCESP). The following is a list of courses and a brief description of each course.

--"BASIC Programming," Computer Science (CS) 101, will be offered during the first 4½-week session, June 21-July 21, for three undergraduate credits. "Basic" programming language, available on most computers, is a popular language in education.

--"COBOL Programming," CS 212, will be offered during the second 4½-week session, July 22-August 20, for three undergraduate credits. "Cobol" language is the standard business language used in most business data processing centers, and is specifically designed to carry out business data processing tasks.

--"Fortran Programming," CS 103, will be offered during the second 4½-week session, July 22-August 20, for three credits. Students will study computer programming using the "Fortran" language. Several programs will be written and run on the computer.

Computer Science 102, "Introduction to Computer Science," which was originally included in CCESP literature, has been canceled for the UM Summer Session.

More information and UM summer bulletins may be obtained from the CCESP, Room 107 of Main Hall, University of Montana, Missoula, Mont. 59801, or by phoning 243-2900.
